## INVESTMENT PRINCIPLES

Fusion ProActive Planet portfolios use a systematic Strategic Asset Allocation approach shared across Fusion Active and Fusion Optima portfolios. The goal is to maximize long-term returns while managing risk. The allocation is adjusted with medium-term market forecasts to incorporate current trends. Fusion Portfolios select components from established providers to outperform benchmarks.

In the Fusion ESG offering, the selected portfolio components are screened to ensure that they have high ESG ratings, provided by MSCI. MSCI ESG fund ratings aim to measure the resilience of funds to financially material environmental, societal and governance (ESG) risks. Where the fund is not rated by MSCI, additional third-party ratings providers are used.

## RISK SCORE

## MARKET COMMENTS

June marked the end of the second quarter with another positive month for portfolio performance, with global equities rising 2.8% and bonds also rising by 0.9% in GBP terms.

Global stocks rose to fresh highs, although this was again largely driven by the US market (+4.3%), and in particular, its AI-related mega-cap names in theme which fails to dissipate. In fact, global stocks excluding the US were flat in June, as was the equal-weighted US index. Emerging markets (+4.8%) outperformed developed markets, driven by the two large semiconductor-intensive nations, Taiwan and Korea, outperforming significantly, up 13% and 9% respectively. Several developed-market central banks began their easing cycles in June, including the European Central Bank which unsurprisingly cut its deposit rate. However, this failed to have its desired effect on markets, as news of a surprise snap French election dominated headlines and fuelled uncertainty. Days after President Macron's announcement, we saw the main French index down by more than 6%, wiping out the majority of gains year to date. This risk-off sentiment was also mirrored in the bond market with the spread between the French and German 10-year government bond yields, seen as a barometer for the risk of holding France's debt, reaching its highest point since February 2017. European equities ended the period -1.7% down.

Commodity prices fell slightly in June, particularly industrial metals and agriculture, however oil rebounded by 6%, benefiting energy positions.
