INVESTMENT PRINCIPLES

Fusion ProActive Planet portfolios use a systematic Strategic Asset Allocation approach shared across Fusion Active and Fusion Optima portfolios. The goal is to maximize long-term returns while managing risk. The allocation is adjusted with medium-term market forecasts to incorporate current trends. Fusion Portfolios select components from established providers to outperform benchmarks.

In the Fusion ESG offering, the selected portfolio components are screened to ensure that they have high ESG ratings, provided by MSCI. MSCI ESG fund ratings aim to measure the resilience of funds to financially material environmental, societal and governance (ESG) risks. Where the fund is not rated by MSCI, additional third-party ratings providers are used.

RISK SCORE

MARKET COMMENTS

September was another positive month for portfolio performance, with global equities rising 3.6% and global bonds also producing positive returns of 1% (GBP terms). This rounded off a very strong Q3 of 2025, which saw positive returns across most major asset classes as trade tensions subsided, AI euphoria continued, and expectations US interest rate cuts ramped up.

The months top performing regions were found within emerging markets (6%), with Chinese equities (7.1%) leading the charge, buoyed by the extension of the US-China trade truce and AI optimism. Latin America (6.3%) also delivered stellar returns as the countries continue to benefit from a weaker dollar. Further excitement around AI pushed US equity indices (+3.8%) to record levels. Technology stocks (+5.8%) lead the way as companies seen as AI beneficiaries reported huge growth in AI-related business. Risk assets were further supported by the Federal Reserve cutting interest rates by 0.25%, describing the decision as a middle path between persistently high inflation and a weakening labour market. Officials hinted a further cut was possible in December if disinflation continued, but stressed that Trump's trade tariffs were complicating the inflation outlook - only hindered by new tariffs starting 1 October, including 100% on branded medicines and 50% on kitchen cabinets, which could raise prices and disrupt supply chains.

Further US political complications including concerns over central bank independence and a looming government shutdown created volatility in bond markets, only strengthening the narrative of gold cementing its place as investors preferred favoured 'safe-haven' - the metal soared again (+8.7%), with gold mining companies (16.2%) reaping the rewards of its appreciation.
