INVESTMENT PRINCIPLES

Fusion ProActive Planet portfolios use a systematic Strategic Asset Allocation approach shared across Fusion Active and Fusion Optima portfolios. The goal is to maximize long-term returns while managing risk. The allocation is adjusted with medium-term market forecasts to incorporate current trends. Fusion Portfolios select components from established providers to outperform benchmarks.

In the Fusion ESG offering, the selected portfolio components are screened to ensure that they have high ESG ratings, provided by MSCI. MSCI ESG fund ratings aim to measure the resilience of funds to financially material environmental, societal and governance (ESG) risks. Where the fund is not rated by MSCI, additional third-party ratings providers are used.

MARKET COMMENTS

April proved to be a strong month for portfolios overall, in which equity markets looked through considerable geopolitical turbulence to reach new highs. Against a backdrop of the unresolved war in the Persian Gulf, with the Strait of Hormuz remaining severely disrupted, and the lingering shadow of a significant energy price shock, global equities (+6.4%) staged a powerful risk-on rally, driven by a rotation back into artificial intelligence (AI) stocks. The theme returned with a clarity of purpose that swept aside the caution of the previous month, propelling technology-linked indices to record highs. Asian markets were the principal beneficiaries (+12.9%), with the gains concentrated in Taiwan (+18%) and South Korea (+23%), where the AI semiconductor supply chain is most deeply embedded. Within developed markets, the US led the way (+7.8%), driven by technology and boosted by a strong corporate earnings season - 84% of reporting companies beat consensus expectations, well above the historical average of 73%, with earnings growth running at 27.1% year-on-year, the highest level since 2021. The UK market (+2.1%) lagged broader global equities, as its structural tilt toward energy, financials, and defensives worked against it in a month which rewarded growth and technology.

Fixed income markets told a sobering counterpart story. Bonds (-1.7%) came under pressure as elevated energy prices pushed inflation expectations higher. This led investors to rethink the outlook for interest rates, with hopes for near-term rate cuts fading, and in some cases, expectations shifting toward further increases.

*The performance figures in this report are based on the live performance of the portfolio since September 2021. Performance before this date is simulated by applying models and algorithms currently used in the construction of this portfolio. The benchmark is the Aviva Multimanager 40-85% Fund which has one of the lowest tracking errors with the IA Mixed investments 40-85 index. Performance prior to June 2014 is reconstructed from the index performance.
