

PORTFOLIO SUMMARY

- Medium-to-high risk portfolio within the Active portfolio range
- Suitable for investors seeking long-term capital growth through high-risk equity investments
- Tilted towards growth assets, with active protection overlay to reduce potential losses in market downturns
- Systematic strategic asset allocation, active management, and diverse assets aim to enhance long-term performance through market timing and selection expertise

PORTFOLIO INFORMATION

Inception Date	Dec 2019
Investment Horizon	At least 5-7 years
Total Ongoing charges for underlying funds	0.32%
Management Charge	0.20%

INVESTMENT PRINCIPLES

Fusion Active portfolios are designed for investors who believe that manager's skill in utilising short-term market opportunities and market timing can increase returns.

The range starts with a systematic Strategic Asset Allocation which aims to maximise expected long-term return within well-defined risk parameters. Medium-term market forecasts and short-term tactical tilts are overlaid to exploit current market trends and economic opportunities to derive the Tactical Asset Allocation. This is implemented using actively managed funds, selected from a range of well-established providers who aim to consistently out-perform their benchmarks.

RISK SCORE

Based on our internal analysis, our Investment Team believes this portfolio corresponds to the following risk levels of external risk profiling tools:

DT	Defaqto	Synaptic
6	6	7

MARKET COMMENTS

July was a relatively flat month for overall portfolio performance, with global equities slipping -0.9% and global bonds returning -1.9% (GBP terms). July was characterised by a pivot between two distinct market narratives – geopolitics and the AI-led investment cycle. Early in the month, escalating tensions between the US and Iran briefly pushed oil prices back above \$100 per barrel, lifting energy prices and commodities (+6.0%). This revived inflation concerns and reinforced expectations that interest rates will remain higher for longer, leading to a broad-based rise in government bond yields.

As geopolitical concerns eased, attention shifted back to the sustainability of returns across the AI landscape. Semiconductor companies (-10.4%) and other AI beneficiaries came under significant pressure as elevated valuations and concerns over the durability of outsized profits weighed on sentiment. This triggered a rotation away from the technology sector (-3.8%) towards more traditional, value-oriented sectors, which was reflected in regional returns. The UK was the top performing region (+3.8%), benefiting from its relatively low exposure to technology and greater weight in energy and financials. US equities (-1.2%) finished the month broadly unchanged. Although company earnings remained strong, investors wanted greater confidence that the significant sums being invested in AI would ultimately translate into sustainable profits. The weakest performance came from emerging markets (-4.3%) and Asia (-4.5%), where AI exposure is concentrated in the semiconductor manufacturing supply chain. Concerns surrounding advanced semiconductor technology from China caused Taiwan (-9.0%) and South Korea (-16.5%) to give up some of their spectacular year-to-date gains, more than offsetting China's (+7.5%) positive contribution.

*The performance figures in this report are based on the live performance of the portfolio since December 2019. Performance before this date is simulated by applying models and algorithms currently used in the construction of this portfolio. The benchmark is the Aviva Multimanager 40-85% Fund which has one of the lowest tracking errors with the IA Mixed investments 40-85 index. Performance prior to June 2014 is reconstructed from the index performance.

Past performance is not a reliable indicator of future results. The value of any investment and the income from it is not guaranteed and can fall as well as rise, so that you may not realise the amount originally invested. The performance figures, portfolio components and the corresponding fund fees vary slightly between different investment platforms, depending on the availability of funds. The portfolio components and all the figures presented in this factsheet are based on the portfolio available on the Aviva platform. Where an investment is denominated in a currency other than sterling, changes in exchange rates between currencies may cause investment values or income to rise or fall. The portfolios may invest in funds or other financial products which have limited liquidity, or which individually have a relatively high-risk profile and/or be unregulated by the Financial Conduct Authority (FCA). This document is issued and approved by Fusion Asset Management LLP ("Fusion"), which is authorised and regulated by the FCA (FRN: 401334).
