

PORTFOLIO SUMMARY

- High-risk portfolio within the ProActive Planet portfolio range
- Suitable for investors seeking capital appreciation, understanding the trade-off with increased investment risk
- Primarily allocated to high-growth and high-risk assets, diversified across risk types and geographical focus
- Combines a systematic asset allocation with ESG active fund manager expertise for market timing and individual asset selection

PORTFOLIO INFORMATION

Inception Date	Sep 2021
Investment Horizon	At least 7 years
Total Ongoing charges for underlying funds	0.44%
Management Charge	0.20%

INVESTMENT PRINCIPLES

Fusion ProActive Planet portfolios use a systematic Strategic Asset Allocation approach shared across Fusion Active and Fusion Optima portfolios. The goal is to maximize long-term returns while managing risk. The allocation is adjusted with medium-term market forecasts to incorporate current trends. Fusion Portfolios select components from established providers to outperform benchmarks.

In the Fusion ESG offering, the selected portfolio components are screened to ensure that they have high ESG ratings, provided by MSCI. MSCI ESG fund ratings aim to measure the resilience of funds to financially material environmental, societal and governance (ESG) risks. Where the fund is not rated by MSCI, additional third-party ratings providers are used.

RISK SCORE

Based on our internal analysis, our Investment Team believes this portfolio corresponds to the following risk levels of external risk profiling tools:

DT	Defaqto	Synaptic
7	7	8

MARKET COMMENTS

July was a relatively flat month for overall portfolio performance, with global equities slipping -0.9% and global bonds returning -1.9% (GBP terms). July was characterised by a pivot between two distinct market narratives – geopolitics and the AI-led investment cycle. Early in the month, escalating tensions between the US and Iran briefly pushed oil prices back above \$100 per barrel, lifting energy prices and commodities (+6.0%). This revived inflation concerns and reinforced expectations that interest rates will remain higher for longer, leading to a broad-based rise in government bond yields.

As geopolitical concerns eased, attention shifted back to the sustainability of returns across the AI landscape. Semiconductor companies (-10.4%) and other AI beneficiaries came under significant pressure as elevated valuations and concerns over the durability of outsized profits weighed on sentiment. This triggered a rotation away from the technology sector (-3.8%) towards more traditional, value-oriented sectors, which was reflected in regional returns. The UK was the top performing region (+3.8%), benefiting from its relatively low exposure to technology and greater weight in energy and financials. US equities (-1.2%) finished the month broadly unchanged. Although company earnings remained strong, investors wanted greater confidence that the significant sums being invested in AI would ultimately translate into sustainable profits. The weakest performance came from emerging markets (-4.3%) and Asia (-4.5%), where AI exposure is concentrated in the semiconductor manufacturing supply chain. Concerns surrounding advanced semiconductor technology from China caused Taiwan (-9.0%) and South Korea (-16.5%) to give up some of their spectacular year-to-date gains, more than offsetting China's (+7.5%) positive contribution.

Past performance is not a reliable indicator of future results. The value of any investment and the income from it is not guaranteed and can fall as well as rise, so that you may not realise the amount originally invested. The performance figures, portfolio components and the corresponding fund fees vary slightly between different investment platforms, depending on the availability of funds. The portfolio components and all the figures presented in this factsheet are based on the portfolio available on the Aviva platform. Where an investment is denominated in a currency other than sterling, changes in exchange rates between currencies may cause investment values or income to rise or fall. The portfolios may invest in funds or other financial products which have limited liquidity, or which individually have a relatively high-risk profile and/or be unregulated by the Financial Conduct Authority (FCA). This document is issued and approved by Fusion Asset Management LLP ("Fusion"), which is authorised and regulated by the FCA (FRN: 401334).
